

We believe students must be able to function in the global environment of the 21st Century through five critical life skills of confidence, communication, creativity, critical thinking and co-existence.

At the heart of our philosophy is the central role that learners drive their transformation; by making choices and effective change.

The 'traditional' approach to education and the role of schools have evolved over the years. Where we once viewed education as rote and scripted, current research calls for a specific focus on self-directed learning.

We see a cohesive system with five dimensions

(Learners, Classrooms, Schools, Communities

participate in the design of their own learning.

To bring this vision to reality, we work together with the Ministry of Education Malaysia and all

and System), working in tandem to achieve a transformative school culture that is both sustainable and scalable. Our vision is to ultimately have our learners

Classrooms

School Leadership

Education Philosophy

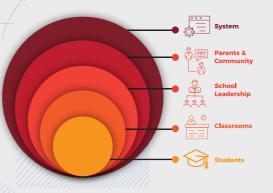

our strategic partners.

Our Theory of Change resulted from a collaboration between academic expertise and practical experiences that emphasise the central position of a learner. Studies have shown that student engagement is a strong predictor of student learning. Students who have been given more autonomy in the classroom and are asked to take ownership of their learning, are thoughtfully engaged, empowered and able to reflect on their own progress and growth.

In this theory, the learner is at the centre of the ring; the students' needs and interests are prioritised and their voice is central to the learning process. This places students at the core of all we do. However, for the inner circle to be successful, the outer (supportive) circles must also continue to innovate and contribute to a comprehensive, inclusive educational environment. While LeapEd's role is to provide support for these dimensions, ultimately, success is the responsibility of the system.

Our Theory of Change is underpinned by the following interactive principles:

TRANSFORMATION

The potential for greatness resides within each child. This potential is not solely realised through classroom participation; rather by the continuous and full support of teachers, school leaders, parents and the community for their holistic transformative empowerment.

SUSTAINABILITY

For change to be sustainable, transformation must include the change of culture in schools. Here we define culture as the variables of leadership and teachers' attitudes, school processes as well as the system's character and behaviour.

SCALABILITY

Sustainable transformation must be replicable and transferable. This involves the acceptance and assistance of the larger eco-system including regulator, government and industry.
